Ages 2-5

Users 5

Dimensions L: 60'-9.9" W: 42'-5.1" H: 30'-5.1" | L: 1859 W: 1296 H: 930 cm

Safety Zone: 17'-9.8" / 15'-11.8" | 543 / 487 cm

Fall Height 1'-9.6" | 60 cm

This toddler play structure is designed as a friendly and inviting dinosaur figure that welcomes children into a gentle world of play and exploration. The sides of the structure form a soft, colorful frame, while at its center lies a small transitional platform leading through an open archway that sparks curiosity and imagination. Children climb the colorful steps, pass through the opening, and emerge into a small adventure on the other side.

The structure combines a sloped climbing surface with rounded handholds, a pleasant crawl-through passage beneath the platform, and a low walking deck that allows toddlers to experience movement and height in a natural and safe way. The short transitions and compact play elements create a smooth flow of climbing, crawling, crossing, and discovery.

It is made from natural robinia wood combined with durable, colorful HPL panels, resulting in a cheerful and welcoming appearance. The blend of natural materials with soft, playful colors creates a warm sense of comfort and a small-scale adventure perfectly suited to the world of early childhood play.

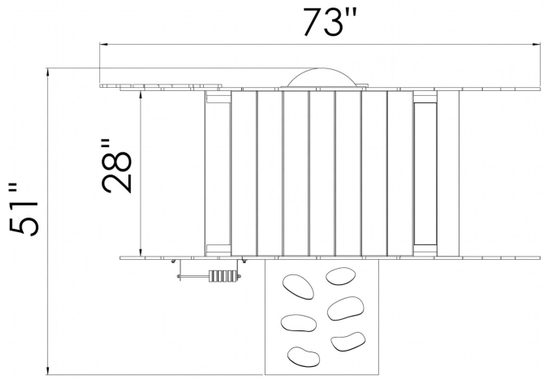

Robinia Wood

European Robinia wood is natural, robust, and durable, particularly suitable for use in outdoor playground equipment. It complies with stringent standards such as FSC, has a smooth and pleasant touch, a natural and authentic appearance, and integrates well with natural surroundings. Its high durability, long lifespan, and being a natural and safe material make it a popular choice for use in playground equipment.

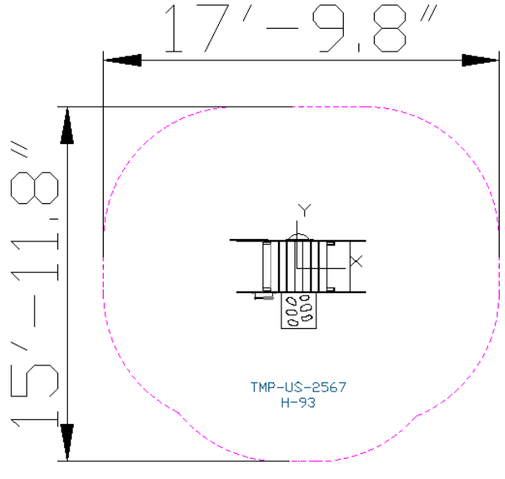

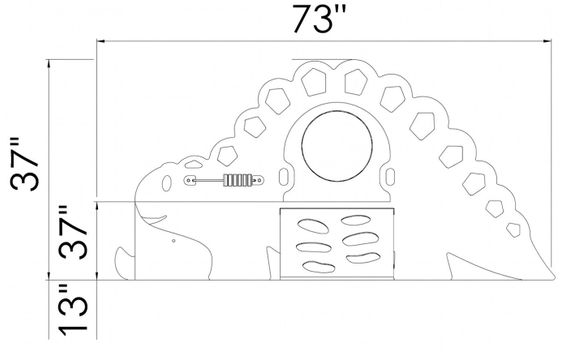

HPL

HPL panels are high-pressure laminate boards produced by saturating multiple layers of kraft paper with phenolic resin. These panels offer high resistance to abrasion, scratches, and chemical impacts, maintaining their quality in both outdoor and indoor conditions. Available in a variety of colors and textures, HPL panels are used for surfaces, walls, and furniture in playground equipment, providing an aesthetic appearance and requiring low maintenance.

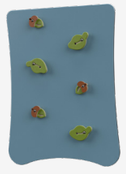

Clear Bubble

The clear bubble offers a unique vantage point, allowing players to see their surroundings from a different perspective, maintaining eye contact between the companion and the player and ensuring continuous, safe communication. The clear bubble enhances the sense of security for players and companions, especially in cases of young children needing support and supervision during play.

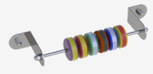

Accessible Stairs

The high-durability stairs provide easy and safe access to the play structure, with a non-slip surface to prevent falls. Climbing and descending the stairs help players develop physical skills such as strength, coordination, and balance. The stairs also encourage independence and self-confidence as players learn to navigate heights and new tasks. Suitable for transfer accessibility to ensure convenient and safe access for players with disabilities, including smooth transitions from a wheelchair to the play structure and back.

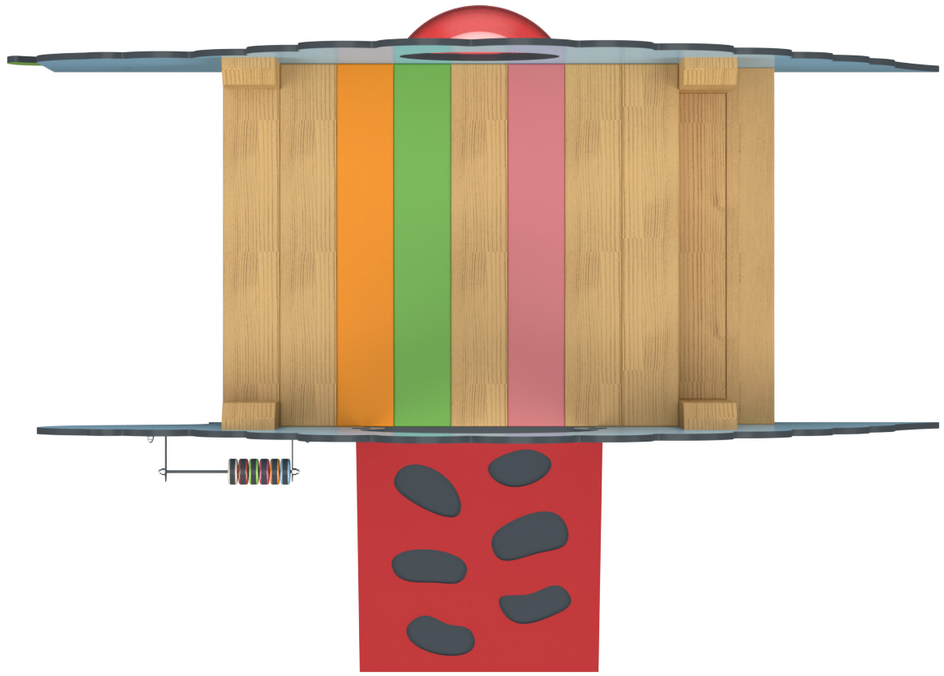

Climbing Wall

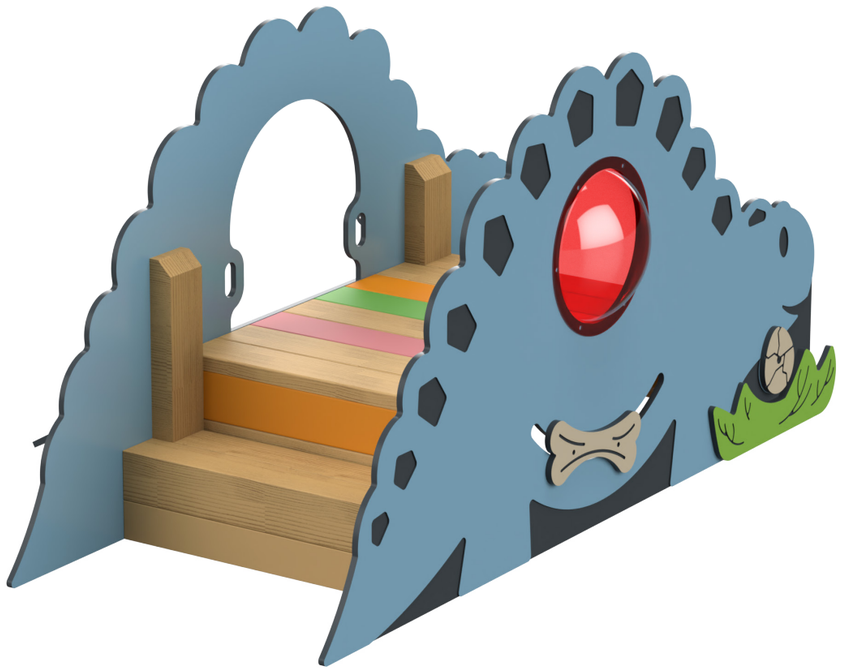

The climbing wall offers a physical challenge that develops the muscle strength, coordination and weight of the players. Climbing the wall improves their problem solving. This is a place where players overcome fears and develop courage and self-confidence.

Abacus

The abacus enhances players' mathematical and cognitive skills. Through play with the abacus, players learn to count, calculate, and solve mathematical problems in a fun and challenging way.

Motor Development

Core muscle strengthening - Strengthening abdominal and back muscles through challenging equipment. Fine motor skills - Developing precise control in small movements through activities requiring fine manual skills.

Cognitive Development

Concentration - Developing the ability to focus and maintain attention in equipment requiring concentration. Curiosity - Encouraging exploration and discovery through equipment providing new and unfamiliar experiences. Creativity - Developing creative thinking and imagination in open and interactive play.

Emotional Development

Courage - Facing fears and new challenges. Confidence - Building self-confidence and belief in one's personal abilities. Independence - Developing independence and the ability to make personal decisions. Resilience - Coping with failure and trying again.

Social Development

Cooperation - Encouraging joint work and reaching shared goals. Communication - Developing effective and clear communication skills with playmates. Friendship creation - Creating friendships and strengthening social bonds.

Physical Development

Climbing - Strengthening arm and leg muscles, developing fitness and endurance. Hanging - Strengthening arm, back, and shoulder muscles. Sliding - Strengthening leg and arm muscles and improving coordination.
